Dear Editor

We thank the Referee for reading our manuscript and for the comments and suggestions. The Referee judges the paper as *"clearly written and deserves publication in the proceedings of the SCES conference."* He/she recommends the following changes:

a.) to add legends in fig. 3

b.) provide an additional figure or an insert displaying a p-T phase diagram indicating the antiferromagnetic ordered phase and the valence-change crossover regime.

We have followed the suggestions by the Referee and made corresponding changes to the manuscript. We believe that the revised version is now ready for publication.

To facilitate the work of the Referee and the Editor, we provide, in addition to the revised version, a PDF version of the revised manuscript, where we indicate all the changes made.

Sincerely yours

B. Wolf
